

DASHBOARD

1. Review → Validate → Approve
2. Use White Color

Navigation

Sidebar:

- Dashboard
- Dataset overview
- Review queue
- Seed Management
- Users
- Settings

Backend: shared API layer (Aurora Postgres + S3, accessed only via API — no direct DB/S3 access from dashboard). Auth: JWT, role-based (verifier/admin).

Login

Purpose: authenticate user, route by role. Key fields: email/username, password. API: **POST /auth/login**

Dashboard First page

1. Total Seed types
2. Total Seeds type
3. Pending Review
4. Total Approved
5. Total Rejected
6. Sidebar:- Dashboard, Review Queue, Dataset Overview, User management, Settings.
7. On clicking Review Queue → opens RQ page
8. Add “Good Morning/evening Username”
9. Add a profile icon in the top-right corner
10. Show 6 photos with seed type and user → when a photo is clicked → opens RQ page with that photo.

Review queue

Purpose: show submissions awaiting verification.

1. Filter: Seed type, User
2. Make sure the queue refreshes on load — when a verifier opens the queue, it pulls fresh **pending_verification** items.
3. One photo at a time
4. Next image auto-loads.
5. Upload Information: Seed type, seed variety, company name, Label by user, image dimensions
6. Improve Accept button

Dataset overview

Purpose: track progress toward dataset targets.

- 1. Top bar: Date range filter (Last 30 days), Seed Type filter, User filter, Status filter, Refresh button**
- 2. Stat cards (4):**
 - **Total Images: 4,582,391 (+12,450 this week)**
 - **Approved: 4,120,450 (89.9% of total)**
 - **Pending Review: 420,341 (9.2% of total)**
 - **Rejected: 41,600 (0.9% of total)**

Each card has a small trend sparkline.
- 3. Seed Type Progress table (left, main content):**

Columns: Seed Type, Seed Variety, Target (Images), Approved, Pending, Rejected, Progress (bar), Label Distribution (Good/Normal/Bad)

Rows shown: Wheat, Rice, Maize, Soybean, Cotton — each with counts, percentages, and a progress bar toward the 150,000 target. Paginated ("Showing 1 to 5 of 32 seed types").
- 4. Right sidebar:**
 - **Label Distribution (All Seeds): horizontal bars for Good (80.0%), Normal (14.2%), Bad (5.8%), with a "View details" link**
- 5. CHECK Seed Type Progress table — one row per variety, not per seed type. Right now each row (Wheat/HD-2967, Rice/IR-64, etc.) looks like it's actually one row per variety, since you added the Variety column. That's fine and probably correct — just make sure "Showing 1 to 5 of 32" refers to varieties, not crop categories, since your Seed Types page manages varieties individually. Just a labelling consistency check, not a redesign.**

Seed management

Purpose: maintain the seed type reference list. **Key fields:** seed type name, crop category. **Actions:** create/edit/deactivate.

Make sure the mobile app's seed type dropdown is fetched from the API at runtime (`GET /seed-types?active=true`), not hardcoded into the app itself.

- 1. Seed Type:** Add New seed type, search seed type, no. of varieties of that seed that are present.
- 2. Seed Variety:** Add new seed variety, search existing seed variety
- 3. Company:** Add new Company name, search existing company name.
